

## Green Labs Program Results in Reduced Emissions and Savings from Reduced Purchasing

The University of Alabama at Birmingham reduced emissions and waste campus-wide by boosting engagement in its Green Labs Program, which includes participation in the International Laboratory Freezer Challenge and implementing Rheaply software.

- ▶ International Laboratory Freezer Challenge participation prevented over 680 metric tons of carbon dioxide emissions from freezer fleet operations
- ▶ Trained over 300 individuals to use the Rheaply shared resource platform to reduce redundant purchases, which resulted in the avoidance of nearly 5 tons of CO<sub>2</sub>e and savings of \$130,000
