

## Helping Community School Districts Reduce Energy Consumption

# OxyChem<sup>®</sup>

OxyChem teamed with Industrial Assessment Centers (IAC) from local universities to perform energy audits at schools in the communities where they operate. Donations made from Oxychem's sustainability community engagement budget funded IAC recommendations including energy efficient light bulbs and fixtures, occupancy sensors, and HVAC improvements at schools in Louisiana and Texas. Paulina Elementary in St. James Parish, LA is estimated to have an annual savings of more than 375,000 kWh of energy and \$34,000 in cost savings.

- ▶ Teamed with Industrial Assessment Centers (IAC) from Louisiana State University and Texas A&M to perform energy audits
- ▶ Donation to LaPorte, TX school district funded upgrades that are estimated to reduce energy consumption by 66,000 kWh
