

Acknowledgements

This report was prepared by the Energy Technology Policy Division within the Directorate on Sustainability, Technology and Outlooks (STO) in co-operation with other directorates and offices of the International Energy Agency. The study was designed and directed by Timur Gül (Head of the Energy Technology Policy Division). The analysis and production of the report was co-ordinated by Araceli Fernandez Pales. The main authors were Araceli Fernandez Pales and Simon Bennett.

The main contributors were Thibaut Abergel (co-lead on buildings modelling and heat pumps analysis), Praveen Bains (bioenergy), Jose Miguel Bermudez Menendez (hydrogen), Chiara Delmastro (co-lead on buildings modelling and cooling analysis), Alexandre Gouy (batteries recycling), Peter Levi (lead on industry modelling and analysis), Raimund Malischek (CCUS), Hana Mandova (industry), Leonardo Paoli (batteries, spillovers, patents), Francesco Pavan (industry), Uwe Remme (lead on energy transformation and supply modelling), Jacopo Tattini (transport), Jacob Teter (lead on transport modelling and analysis), Tiffany Vass (lightweighting, policy, industry) and Sadanand Wachche (batteries recycling). Other contributors were Marine Gorner, Pierre Leduc, Taku Hasegawa, Trevor Morgan and Per-Anders Widell. Caroline Abettan, Claire Hilton, Reka Koczka and Diana Louis provided essential support.

Edmund Hosker carried editorial responsibility. Jennifer Allain was the copy-editor.

The main contributors from across the agency were: Niels Berghout (CCUS), Sara Budinis (DAC), Jean-Baptiste Le Marois (policy, innovation metrics) and Luis Munuera (technology readiness, spillovers). Other contributors were Adam Baylin-Stern, Louis Blanluet and Pharoah Le Feuvre.

Mechthild Wörsdörfer, Director of STO, provided encouragement and support throughout the project. Valuable comments and feedback were provided by other senior management and other colleagues within the IEA, in particular Nick Johnstone, Keisuke Sadamori, Laura Cozzi, Laszlo Varro, Joel Couse, Paolo Frankl, Tim Gould, Brian Motherway and Samantha McCulloch.

Thanks also go to the Communications and Digital Office (CDO) for their help in producing the report, including Jad Mouawad, Head of CDO, and Jon Custer, Astrid Dumond, Tanya Dyhin, Christopher Gully, Maria Kyriacou, Jethro Mullen, Isabelle Nonain-Semelin, Julie Puech and Therese Walsh.

The work could not have been achieved without the support provided by the Japanese Ministry of Economy, Trade and Industry and the Netherlands Ministry of Economic Affairs and Climate Policy.

The analysis and findings in this report draw on strategic guidance received during an ETP-2020 consultation meeting with high-level energy officials and experts from government, industry, international organisations, finance and academia on 3 July 2019. Additional guidance came from insights, feedback and data obtained at a high-level workshop on accelerating energy innovation organised by the IEA organised in Paris on 18 December 2019. The work also benefited from information and views provided by participants within the Technology Collaboration Programme by the IEA, which brings together thousands of experts across government, academia and industry from 55 countries in order to accelerate energy technology innovation.

Many experts from outside the IEA provided input, commented on the underlying analytical work and reviewed the report. Their comments and suggestions were of great value. They include:
