

SOUTH AUSTRALIAN ELECTRICITY MANUAL LOAD SHEDDING LIST

Group list last revised: November 2019

Most recent load shedding: 8 February 2017 (within Group 9)

Each row in the table below identifies an electricity 'feeder' that supplies the corresponding areas listed. The highlighted line identifies the area most recently switched off for load shedding.

Next time manual load shedding occurs, it will start with the feeder after the highlighted line. There may be multiple feeders to an area, so your area may appear multiple times in a group on the list.

A feeder may be switched off for approximately 45 minutes. If your power is off for substantially more than 45 minutes, there may be a local power failure (rather than load shedding).

The number of feeders switched off depends on how much the electricity demand needs to be reduced to match the electricity supply available at the time.
