

# Coronavirus Disease 2019 (COVID-19) Daily Situation Report of the Robert Koch Institute

06/08/2020 - UPDATED STATUS FOR GERMANY

<b>Confirmed cases</b>	Deaths	Deaths (%)	Recovered
213,067	9,175	4.3%	ca. 195,200**
(+1,045*)	(+7*)		

\*Change compared to previous day; \*\*Estimate

COVID-19 cases are notified to the local public health department in the respective districts, in accordance with the German Protection against Infection Act (IfSG). The data are further transmitted through the respective federal state health authority to the Robert Koch Institute (RKI). This situation report presents the uniformly recorded nationwide data on laboratory-confirmed COVID-19 cases transmitted to RKI.

- Changes since the last report are marked blue in the text -

#### Summary (as of 06/08/2020 12:00 AM)

- In the past few weeks, the number of districts reporting zero COVID-19 cases over a period of 7 days has decreased markedly. In parallel, the COVID-19 incidence has risen in many federal states. This trend is concerning.
- The cumulative nationwide incidence over the past 7 days was 5.8 cases per 100,000 inhabitants and thus further increased slightly, albeit at a low level. A total of 65 districts transmitted zero cases over the past 7 days. In a further 228 districts the 7-day-incidence is below 5.0/100,000 inhabitants.
- In total, 213,067 laboratory-confirmed COVID-19 cases and 9,175 deaths due to COVID-19 have been electronically reported to the RKI in Germany.
- In the Bavarian district of Dingolfing-Landau a COVID-19 related outbreak occurred with >390
  cases among harvest workers of an agricultural company and among employees of a canning
  company.
- Moreover, further COVID-19-related outbreaks are being reported in various settings, including
  nursing homes and hospitals, facilities for asylum-seekers and refugees, as well as in the context of
  religious or family events.

## **Epidemiological Situation in Germany**

#### **General current assessment**

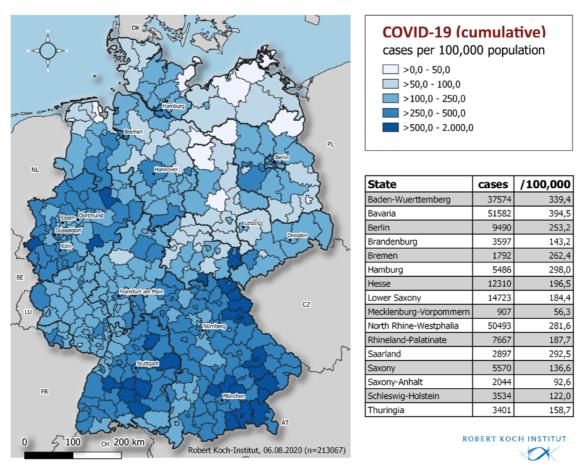

An increase in the daily number of reported COVID-19 cases occurred over the past 2 weeks in many of the federal states. After Covid-19 case numbers had decreased slightly at the beginning of the week due to the testing and reporting delay at the weekend, cases have increased again.

Nationwide, there are many smaller case outbreaks in different administrative districts in various settings, such as larger family events, leisure activities, occupational settings, but also in community and health facilities. In addition, COVID-19 cases are increasingly being identified among people returning from travel abroad.

The number of new cases reported daily has been increasing over the past two weeks. This development is very concerning and will continue to be monitored very closely by the RKI. A further worsening of the situation must be avoided. This will only succeed if the entire population continues to be committed to decreasing transmission, e.g. by consistently observing rules of physical distancing and hygiene - also in outdoor settings -, by airing indoor areas and, where indicated, wearing a community or face mask correctly.

#### Geographical distribution of cases

Epidemiological analyses are based on validated cases notified electronically to the RKI in line with the Protection Against Infection Law (Data closure: 12:00 AM daily). Since January 2020, a total of 213,067 (+1,045) laboratory-confirmed cases of COVID-19 have been electronically reported to and validated by the RKI (see **Table 1**). A total of 65 districts reported no cases in the past 7 days. In the past few weeks, the number of districts not transmitting any COVID-19 cases over a period of 7 days decreased continuously, from a maximum of 125 districts on 12/07/2020.

**Figure 1**: Number and cumulative incidence (per 100,000 population) of the 213,067 electronically reported COVID-19 cases in Germany by county and federal state (06/08/2020, 00:00 AM). Please see the COVID-19 dashboard (https://corona.rki.de/) for information on number of COVID-19 cases by county (local health authority).

**Table 1:** Number and cumulative incidence (per 100,000 population) of laboratory-confirmed COVID-19 cases and deaths for each federal state electronically reported to RKI, Germany (06/08/2020, 12:00 AM). The number of new cases covers positive cases, which have been sent to the local health department at the same day, but also at previous days.

Federal State	Total number of cases	Number of new cases	Cases/ 100,000 pop.	Cases in the last 7 days	7-day incidence per 100,000 pop.	Number of deaths	Number of deaths/ 100,000 pop.
Baden-Wuerttemberg	37,574	60	339	363	3.3	1,851	16.7
Bavaria	51,582	205	394	722	5.5	2,624	20.1
Berlin	9,490	91	253	310	8.3	224	6.0
Brandenburg	3,597	9	143	36	1.4	168	6.7
Bremen	1,792	2	262	29	4.2	56	8.2
Hamburg	5,486	25	298	101	5.5	261	14.2
Hesse	12,310	56	196	397	6.3	523	8.3
Mecklenburg-Western Pomerania	907	18	56	45	2.8	20	1.2
Lower Saxony	14,723	52	184	297	3.7	654	8.2
North Rhine- Westphalia	50,493	425	282	2,052	11.4	1,752	9.8
Rhineland-Palatinate	7,667	49	188	169	4.1	239	5.9
Saarland	2,897	6	292	29	2.9	174	17.6
Saxony	5,570	10	137	33	0.8	225	5.5
Saxony-Anhalt	2,044	8	93	32	1.4	64	2.9
Schleswig-Holstein	3,534	18	122	128	4.4	158	5.5
Thuringia	3,401	11	159	40	1.9	182	8.5
Total	213,067	1,045	256	4,783	5.8	9,175	11.0

As part of quality checks and data cleaning by the health authorities and regional offices, corrections to cases previously transmitted (e.g. detection of duplicate reports) can occasionally lead to negative values for the number of new cases.

#### Distribution of cases over time

The first COVID-19 cases in Germany were notified in January 2020. Figure 2 shows COVID-19 cases transmitted to RKI according to date of illness onset from 01/03/2020 onwards. Of these cases, the onset of symptoms is unknown in 66,869 cases (31%), thus their date of reporting is provided in Figure 2.

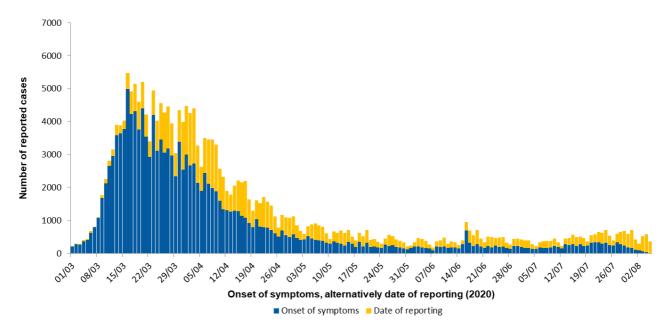

Figure 2: Number of Covid-19 cases in Germany electronically reported to the RKI by the date of symptoms onset or –if unknown- alternatively by date of reporting from 01/03/2020 (06/08/2020, 12:00 AM).

#### **Demographic distribution of cases**

Of all notified cases, 51 are female and 49% are male. Among all those notified cases, for which data on age and gender were reported, 6,374 were children under 10 years of age (3.0%), 11,540 children and teenagers aged 10 to 19 years (5.4%), 95,432 persons aged 20 to 49 years (45%), 62,579 persons aged 50 to 69 years (29%), 31,199 persons aged 70 to 89 years (15%) and 5,477 persons aged 90 years and older (2.6%). The age and/or gender was unknown in 466 notified cases. Cases had a mean age of 47 years (median age 48 years). The highest incidences are seen in persons aged 90 years and older (Figure 3).

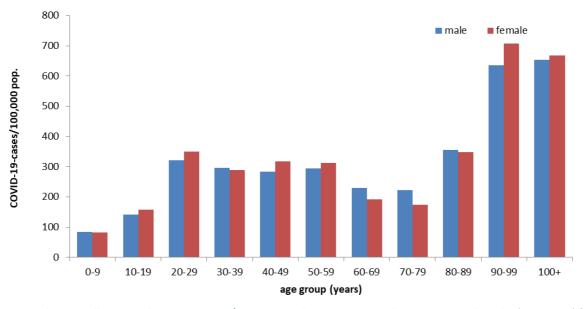

Figure 3: Electronically reported COVID-19 cases/100,000 population in Germany by age group and gender (n=212,594) for cases with information available (06/08/2020,12:00 AM).

#### **Clinical aspects**

Information on symptoms is available for 180,571 (85%) of the notified cases. Commonly reported symptoms were cough (47%), fever (40%) and rhinorrhoea (21%). Pneumonia was reported in 5,297 cases (3.0%). Since calendar week 17, cases are reported to the RKI as a distinct COVID-19 surveillance

category. Since then, ageusia and anosmia can also be entered as symptoms. At least one of these two symptoms was reported in 5,469 of 36,443 cases (15%).

Hospitalisation was reported for 30,955 (17%) of 185,351 COVID-19 cases with information on hospitalisation status.

Approximately 195,200 people have recovered from their COVID-19 infection. Since the exact date of recovery is unknown in most cases, an algorithm was developed to estimate this number.

A total of 9,175 COVID-19-related deaths have been reported in Germany (4.3% of all confirmed cases). Of these, 5,077 (55%) are men and 4,093 (45%) are women (see Table 2), the gender was unknown in five cases.

The median age of COVID-19 cases reported to have died was 82 years. Of all deaths, 7,841 (85%) were in people aged 70 years or older, but only 17% of all cases were in this age group. Thus far, three deaths among COVID-19 cases under 20 years of age have been reported to the RKI. Pre-existing medical conditions were reported for all three.

**Table 2**: Number of notified COVID-19 deaths by age group and gender electronically reported to RKI (Data available for 9,170 of notified deaths; 06/08/2020, 12:00 AM)

Gender		Age group (in years)									
	0-9	10-19	20-29	30-39	40-49	50-59	60-69	70-79	80-89	90-99	100+
Male		2	6	17	57	241	655	1,391	2,128	574	6
Female	1		3	6	22	87	235	673	1,926	1,096	44
Total	1	2	9	23	79	328	890	2,064	4,054	1,670	50

#### Occupation, accommodation or care in facilities

In accordance with the Protection Against Infection Act, the RKI receives information on occupation, accommodation or care in a facility relevant for infection control for reported COVID-19 cases. Since information on occupation, accommodation or care in these facilities is missing in 25% of cases, the proportion of cases working, accommodated or cared for in these facilities reported here should be considered minimum values. Among the COVID-19 cases reported from the above mentioned facilities, the proportion of cases that actually acquired their infection in these facilities is unknown.

**Table 3**: Notified COVID-19-cases according to possible occupation, accommodation or care in facilities relevant for transmission of infectious diseases electronically reported to RKI (211,831\* cases, no data available for 53,086 cases; 06/08/2020, 12:00 AM)

Facility according to		Total	Hospitalised	Deaths	Recovered (estimate)
§ 23 IfSG (e.g. hospitals, outpatient clinics and practices, dialysis clinics or	Cared for / accommodated in facility	3,640	2,615	659	2,900
outpatient nursing services)	Occupation in facility	14,500	661	23	14,300
§ 33 IfSG (e.g. day care facilities, kindergartens, facilities for after school care, schools or other	Cared for / accommodated in facility*	4,356	88	1	4,000
educational facilities, children's homes, holiday camps)	Occupation in facility	2,975	155	7	2,900
§ 36 IfSG (e.g. facilities for the care of older, disabled, or other persons in need of care, homeless shelters, community facilities for asylumseekers, repatriates and refugees as well as other mass accommodation and prisons)	Cared for / accommodated in facility	18,713	4,203	3,634	14,800
	Occupation in facility	10,263	435	39	10,100
§ 42 IfSG (e.g. meat processing plants or kitchens in the catering trade, in inns, restaurants, canteens, cafés, or other establishments with or for communal catering)	Occupation in facility	5,140	221	5	4,900
Neither cared for, accommodated in nor working in a facility		99,158	16,831	3,513	92,000

<sup>\*</sup>for care according to § 33 IfSG only cases under 18 years of age are taken into account, as other information may be assumed to be incorrect. IfSG: Protection Against Infection Law

The number of COVID-19 cases was highest among persons cared for or employed in medical and other care facilites according to §23 and §36 IfSG (Table 3). The number of deaths was particularly high among persons cared for in these facilities.

Among the cases reported as working in medical facilities, 73% were female and 27% male. Their median age was 41 years. The high number of cases among people cared for or working in various care facilities (Section 36 IfSG) is consistent with numerous reported outbreaks, especially in nursing homes. The low number of cases among persons who attend or work in facilities providing child care or education (Section 33 IfSG) reflects the low incidence in children observed thus far. The increase in the number of cases among persons working in the food sector (§42) is largely due to outbreaks in meat processing plants.

#### **Outbreaks**

Five districts reported an increased incidence of >25 cases in 7 days/100.000 inhabitants: the districts of Dingolfing-Landau in Bavaria, the city Offenbach in Hesse, the city Ingolstadt in Bavaria, the district of Odenwaldkreis in Hesse and the district Dueren in North Rhine-Westphalia.

A high 7-day incidence with more than 100 cases per 100,000 inhabitants was observed In the district of Dingolfing-Landau. The increase is due to two outbreaks with >390 COVID-19-cases, one among harvest workers of an agricultural company and the other among employees of a canning company. The latter is based in two locations, all employees are currently being tested. Quarantine was ordered for all

employees of both companies. The local population (3,300 inhabitants) has been offered voluntary testing. In the district of Offenburg the increase in case numbers is predominantly due to cases among returning travelers; this is also explains a number of cases in Herne.

The cases reported from Ingoldstadt can be traced back to 2 outbreaks, 1 in a religious and 1 in a family/ work setting. The tests among the contacts are being processed currently and thus it is likely that more cases will be reported in the upcoming days.

In the district of Odenwaldkreis most of the cases can be traced back to one family, it should be noted though that there was no celebration or greater gathering reported.

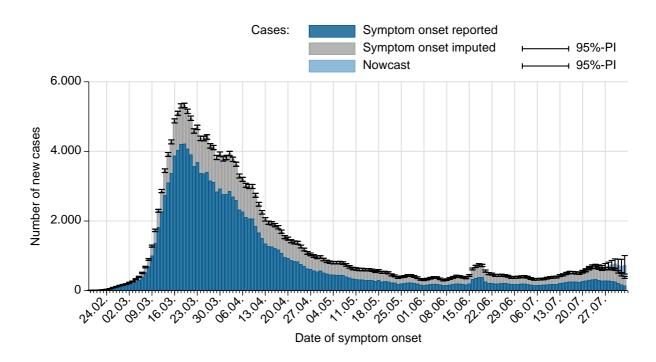

In the district of Dueren the higher numbers of cases are due on the one hand to returning travellers and on the other hand to a smaller number of cases among employees of an agricultural company.

Further COVID-19 outbreaks continue to be reported in nursing homes and hospitals, refugee facilities, family events, child-day care facilities as well as religious communities.

#### Estimation of the reproduction number (R)

The presented case numbers do not fully reflect the temporal progression of incident COVID-19-cases, since the time intervals between actual onset of illness and diagnosis, reporting, as well as data transmission to the RKI vary greatly. Therefore, a nowcasting approach is applied to model the true temporal progression of COVID-19 cases according to illness onset. Figure 4 shows the result of this analysis.

The reproduction number, R, is defined as the mean number of people infected by one infected person. R can only be estimated based on statistical analyses such as nowcasting and not directly extracted from the notification system.

**Figure 4**: Number of notified COVID-19 cases with known date of illness onset (dark blue), estimated date of illness onset for cases without reported date of onset (grey) and estimated number of not yet notified cases according to illness onset electronically reported to RKI (light blue) (as of 06/08/2020, 12 AM, taking into account cases up to 02/08/2020).

A sensitive 4-day-R-value can be estimated by using a 4-day moving average of the number of new cases estimated by nowcasting. This 4-day value reflects the infection situation about one to two weeks ago. This value reacts sensitively to short-term changes in case numbers, such as those caused by individual

outbreaks. Furthermore, outbreak dynamics may be influenced widespread testing performed among affected persons, leading to therapid detection of many additional COVID-19 cases. This can lead to relatively large fluctuations in the estimated R-value, especially if the total number of new cases is small.

The current estimate of the 4-day R-value is 0.99 (95%-prediction interval: 0.80 - 1.26) and is based on electronically notified cases as of 05/08/2020, 12:00 AM.

Similarly, the 7-day R-value is estimated by using a moving 7-day average of the nowcasting curve. This compensates for fluctuations more effectively, as this value represents a slightly later course of infection of about one to a little over two weeks ago. The 7-day R-value is estimated at 1.06 (95% prediction interval: 0.95 - 1.20) and is based on electronically notified cases as of 05/08/2020, 12:00 AM.

The reported 7-day R value has been around 1 or slightly above since mid-July 2020. This is due to a larger number of small outbreaks, but also case numbers in Germany overall, which have increased steadily in recent weeks since the relaxation of the measures.

See also the RKI's statement on high case numbers of 24/07/2020 https://www.rki.de/DE/Content/InfAZ/N/Neuartiges\_Coronavirus/Gestiegene\_Fallzahlen.html

Sample calculations as well as an excel sheet presenting both R-values with daily updates can be found under <a href="https://www.rki.de/covid-19-nowcasting">www.rki.de/covid-19-nowcasting</a>. A detailed methodological explanation of the more stable 7day R-value is also available there. More general information and sample calculations for both R-values can also be found in our FAQs (<a href="https://www.rki.de/covid-19-faq">https://www.rki.de/covid-19-faq</a>).

A detailed description of the methodology is available at <a href="https://www.rki.de/DE/Content/Infekt/EpidBull/Archiv/2020/17/Art\_02.html">https://www.rki.de/DE/Content/Infekt/EpidBull/Archiv/2020/17/Art\_02.html</a> (Epid. Bull. 17 | 2020 from 23/04/2020)

## **DIVI** intensive care register

A registry of the German Interdisciplinary Association for Intensive and Emergency Medicine (DIVI), the RKI and the German Hospital Federation (DKG) was established to document intensive care capacity as well as the number of COVID-19 cases treated in participating hospitals

(<a href="https://www.intensivregister.de/#/intensivregister">https://www.intensivregister.de/#/intensivregister</a>). The DIVI intensive care register documents the number of available intensive care beds in the reporting hospitals on a daily basis. Since 16/04/2020, all hospitals with intensive care beds are required to report.

As of 05/08/2020, a total of 1,274 hospitals or departments reported to the DIVI registry. Overall, 30,527 intensive care beds were registered, of which 21,449 (70%) are occupied, and 9,078 (30%) are currently available. The number of COVID-19 cases treated in participating hospitals is shown in Table 4.

Table 4: COVID-19 patients requiring intensive care (ICU) recorded in the DIVI register (06/08/2020, 12:15 PM).

	Number of patients	Percentage	Change to previous day*
Currently in ICU	236		-3
- of these: mechanically ventilated	131	56%	-9
Discharged from ICU	15,931		118
- of these: deaths	3,931	25%	47

<sup>\*</sup>The interpretation of these numbers must take into account the the number of reporting hospitals and therefore the number of reported patients may change from day to day. On certain days, this can explain an occasionally important decrease or increase in the cumulative number of discharged patients or deaths compared with the day before.

### Data on emergency department utilisation

In collaboration with the National Emergency Department Register AKTIN (<a href="https://www.aktin.org/en/">https://www.aktin.org/en/</a>), the RKI analysed emergency department utilisation and prepared a weekly situation report: <a href="https://www.rki.de/EN/Content/Institute/DepartmentsUnits/InfDiseaseEpidem/Div32/sumo/sumo.html">https://www.rki.de/EN/Content/Institute/DepartmentsUnits/InfDiseaseEpidem/Div32/sumo/sumo.html</a>.

As of 02-08-2020, data from 10 emergency departments have been taken into account. Between 01-11-2019 and 01-03-2020, an average of 6,608 emergency department admissions per week was recorded. From the middle to the end of March 2020, a 40% decrease in the number of admissions was observed, to 3,969 admissions in week 13, 2020. Similar declines were evident in comparable surveillance systems in the USA, England and Wales. In parallel to the decrease in daily admissions, public measures were taken to contain the COVID-19 pandemic in Germany. Subsequently, an increase in admissions has been observed. In week 31 2020, 6,381 admissions were recorded. Therefore, the number of admissions is currently 3% below the average of November 2019 to February 2020 (see Figure 5).

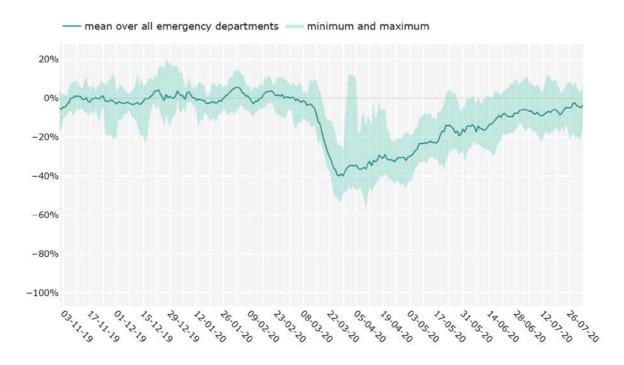

Figure 5: Number of emergency department attendances in Germany, from November 2019 to July 2020; 7-day moving average of 10 emergency departments; relative deviation to the reference period 01-11-2019 – 01-03-2020 (as of 02-08-2020)

## Information from additional RKI based surveillance systems for actue respiratory illnesses

GrippeWeb ("FluWeb") is a web interface at RKI for monitoring the activity of acute respiratory illness (ARI), utilizing information from the population. In week 31, 2020, the rate of ARI ("ARI rate") decreased. Further information can be found under https://grippeweb.rki.de/.

The Influenza Working Group (AGI) monitors ARI through a sentinel network of physicians in private practices. In week 31, 2020, the overall number of patient visits due to acute respiratory infections decreased. The ARI incidence decreased for the age group 0 to 14 years and remained stable for the age group 60 years and older. Overall, it remained at a low level that matches the level of previous season at this time of the year. Within the viral surveillance of the AGI, rhinovirus was detected in 13 of 24 sentinel samples (54%) in week 31, 2020. Since week 16, 2020, no SARS-COV-2 has been detected within the viral sentinel surveillance of the AGI. Further information can be found under <a href="https://influenza.rki.de/">https://influenza.rki.de/</a>.

A third, ICD-10 code based system, monitors severe acute respiratory illness (SARI) in hospitalized patients (ICD-10 codes J09 to J22: primary diagnoses influenza, pneumonia or other acute infections of the lower respiratory tract). In week 30, 2020, the total number of SARI cases remained stable overall. Of all reported SARI cases in week 30, 2020, 3% were diagnosed with COVID-19 (ICD-10 code U07.1!) (See Figure 6). Please note that due to data availability only patients with an ICD-10 Code for SARI as the main diagnosis and hospitalisation duration of up to one week were included in this analysis.

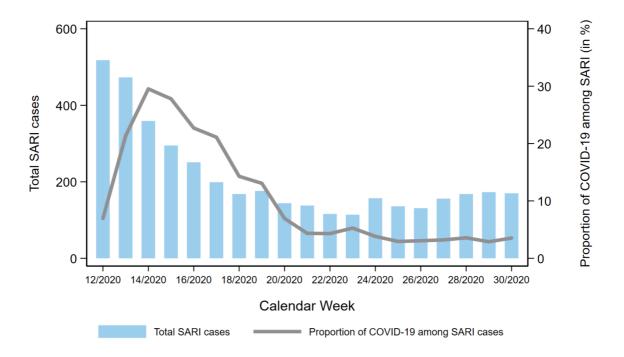

Figure 4: Weekly number of SARI cases (ICD-10 codes J09-J22) and proportion of cases with a diagnosis of COVID-19 (ICD-10 code U07.1!) among SARI cases with duration of hospitalisation of up to one week and with date of admission in weeks 12 to 30, 2020, from 70 sentinel hospitals

## **Risk Assessment by the RKI**

#### **General assessment**

At the global and the national level, the situation is very dynamic and must be taken seriously. The number of cases continues to increase worldwide. The number of newly reported cases declined from mid-March until early July. Since then, case numbers have been steadily increasing. Some districts are transmitting very few or no cases to the RKI. However, individual outbreaks are increasingly occurring again, which can reach considerable proportions. Vaccines and anti-viral therapeutics are currently not available. The RKI currently assesses the risk to the health of the German population overall as high and as very high for risk groups. This assessment may change at short notice based on new insights.

#### Infection risk

SARS-CoV-2 can be transmitted easily from person to person. The risk of infection depends heavily on the regional spread, living conditions and also on individual behaviour (physical distancing, hygiene measures and community masks).

#### **Disease severity**

In most cases, the disease is mild. The probability of progression towards serious disease increases with increasing age and underlying illnesses. Individual long-term consequences cannot be estimated yet.

#### Burden on health system

The burden on the health care system depends largely on the geographical distribution of cases, health care capacity and initiation of containment measures (isolation, quarantine, physical distancing etc.). In large parts of Germany it is currently low, but it can rapidly increase locally and affect the public health system in particular as well as medical care facilities.

## Measures taken in Germany

- Information from the Ministry of Health for travelers entering Germany: Frequently asked questions and answers (in German) <a href="https://www.bundesgesundheitsministerium.de/coronavirus-infos-reisende/faq-tests-einreisende.html">https://www.bundesgesundheitsministerium.de/coronavirus-infos-reisende/faq-tests-einreisende.html</a>
- Corona-Warn-App
  <a href="https://www.rki.de/DE/Content/InfAZ/N/Neuartiges">https://www.rki.de/DE/Content/InfAZ/N/Neuartiges</a> Coronavirus/WarnApp/Warn App.html
- Regulations for persons entering Germany in connection with the novel coronavirus SARS-CoV-2
   (15.06.2020) <a href="https://www.rki.de/DE/Content/InfAZ/N/Neuartiges">https://www.rki.de/DE/Content/InfAZ/N/Neuartiges</a> Coronavirus/Transport/BMG Merkblatt Reisende Tab.html
- Information on additional regulations at the regional level regarding control measures such as physical distancing or quarantine regulations for persons entering from other countries can be accessed here: <a href="https://www.bundesregierung.de/breg-de/themen/coronavirus/corona-bundeslaender-1745198">https://www.bundesregierung.de/breg-de/themen/coronavirus/corona-bundeslaender-1745198</a> (in German)
- (Non-medical) face masks must be worn on public transport and in shops in all federal states.
- Data on current disease activity can be found in the daily situation reports and on the RKI dashboard:
  - https://corona.rki.de/
- A distance of 1.5 metres to other indivduals must be maintained in public spaces:

  <a href="https://www.bundesregierung.de/breg-de/themen/coronavirus/besprechung-der-bundeskanzlerin-mit-den-regierungschefinnen-und-regierungschefs-der-laender-1733248">https://www.bundesregierung.de/breg-de/themen/coronavirus/besprechung-der-bundeskanzlerin-mit-den-regierungschefinnen-und-regierungschefs-der-laender-1733248</a> (in German)
